MINISTRY OF EDUCATION AND SCIENCE OF UKRAINE

KYIV NATIONAL UNIVERSITY OF TECHNOLOGIES AND DESIGN

APPROVED BY ACADEMIC COUNCIL
Chairman of Academic Council
Ivan GRYSHCHENKO
(Minutes № 11, June 30 2021)

EDUCATIONAL - PROFESSIONAL PROGRAM

Biotechnology

Level of higher education	first bachelor's degree
Degree	Bachelor
Subject area	16 Chemical Engineering and Bioengineering
Specialty	162 Biotechnology and Bioengineering
Qualification	Bachelor in Biotechnology and Bioengineering

LETTER OF APPROVAL

EDUCATIONAL - PROFESSIONAL PROGRAM

Biotechnology

Level of higher education	first (Bachelor)
Degree	Bachelor
Subject area	16 Chemical Engineering and Bioengineering
Specialty	162 Biotechnology and Bioengineering
Qualification	Bachelor in Biotechnology and Bioengineering
Vice-Rector for Scientific and Ped	agogical Activity (Educational Activity)
(date) (sign	Oksana MORHULETS (initials and the last name)
	and Biopharmaceutical Technologies Olha BAULA
(date) (sign	nature) Olha BAULA (initials and the last name)
Discussed and recommended at \underline{Fur} Minutes $Note 12$ of $(12^{th}) \times \underline{April}$ 20	the meeting of the Department of <i>Biotechnology, Leather and</i> 021
Head of the Department of Biotec	hnology, Leather and Fur
(date) (sign	nature) Olena MOKROUSOVA (initials and the last name)
Head of the project team	Ihor HRETSKIY
Enacted by order of the KNUTD f	rom "02" July 2021 № 192

INTRODUCTION

Developed by: Kyiv National University of Technologies and Design

CONTENT BY:

Head of the project team

IHOR HRETSKYI, PhD, Associate Professor of Department of Biotechnology, Leather and Fur, Faculty of Chemical and Biopharmaceutical Technologies, Kyiv National University of Technologies and Design

Members of the project team:

IRYNA VOLOSHYNA, PhD, Associate Professor of Department of Biotechnology, Leather and Fur, Faculty of Chemical and Biopharmaceutical Technologies, Kyiv National University of Technologies and Design

OLGA YUNHIN, PhD, Associate Professor of Department of Biotechnology, Leather and Fur, Faculty of Chemical and Biopharmaceutical Technologies, Kyiv National University of Technologies and Design

OLGA SHYDLOVSKA, PhD, Senior Lecturer of Department of Biotechnology, Leather and Fur, Faculty of Chemical and Biopharmaceutical Technologies, Kyiv National University of Technologies and Design

LIUDMYLA LASTOVETSKA, student, Department of Biotechnology, Leather and Fur, Faculty of Chemical and Biopharmaceutical Technologies, Kyiv National University of Technologies and Design

KACHAN ROMAN, Ph.D., Production Director, Interdez LLC

SAVCHUK OLEKSIY, Ph.D., Professor, Head of the Department of Biochemistry, Educational and Scientific Center «Institute of Biology and Medicine» of Taras Shevchenko National University of Kyiv

1. Profile of the educational - professional program **Biotechnology**

	1 – General information									
Full name of a higher	Kyiv National University of Technologies and Design									
education institution a	Department of Biotechnology, Leather and Fur									
structural unit										
Higher education and	Higher Education Level - First (Bachelor)									
qualification in the	Higher Education Degree - Bachelor									
original language	Subject area - 16 Chemical Engineering and Bioengineering									
	Specialty - 162 Biotechnology and Bioengineering									
Type of diploma and	Bachelor's Degree, single, 240 ECTS credits, duration of training - 3									
scope of the educations	years and 10 months									
program	Bachelor's Degree, single, 180 ECTS credits, duration of training - 2									
	years and 10 months									
Accreditation	Certificate UD № 11010111 dated 09.07.2019									
Cycle/level	National Qualifications Framework of Ukraine: Bachelor - Sixth									
	Level									
Prerequisites	Complete general secondary education, professional higher									
	education or junior bachelor's degree (junior specialist). In									
	accordance with the Standard of Higher Education in the specialty									
	based on the degree of junior bachelor (OQR junior specialist), the									
	University recognizes and recalculates ECTS credits received within									
	the previous educational program for junior bachelor (junior									
	specialist)									
Language (-s) of teach	Ing Ukrainian, English									
Duration of the	Until July 1 st , 2024									
educational program										
Website for a permane	http://knutd.edu.ua/ekts/									
description of the										
educational program	2. Drawn ago of the advectional macayans									
E	2 – Purpose of the educational program									
	opment of general and professional competencies in the field of									
	engineering for the complex implementation of project-technological,									
	and scientific-research work related to the use of biological agents and									
_	biologically active substances and products through biosynthesis and/or									
	d at acquiring by the student the knowledge, skills and abilities necessary									
	ganization of biotechnological production and product quality assessment 3 – Characteristics of the educational program									
Subject matter	The program is focused on the formation of applicants' competencies for									
	the acquisition of deep knowledge, skills and abilities in the specialty.									
	Compulsory educational components – 75%, of which: disciplines of									
	general education -33% , including learning a foreign language -13% ;									
	professional education – 67%, including practical training – 13% and									
	Bachelor's thesis – 7%. Disciplines of free choice of students: 25% are									
	selected from the university catalog in accordance with the approved									
	procedure at the University.									
Orientation of the	The bachelor's degree program focuses on training professionals who									
program	can use biological agents and their products at the professional level to									
	obtain biologically active substances and products through biosynthesis									
	and/or biotransformation, considering the bioethics and biosafety of									
	society.									
The main focus of	Emphasis is placed on the formation and development of professional									
the program and	competencies to solve applied problems in the field of biotechnology									
specialization	and bioengineering through research, development, creation, and									
~Formization	and the second s									

	production of biotechnological products for medicine, health,											
	agriculture, ecology, energy, light industry and more.											
	Keywords: biological agents, biotechnology, immunobiotechnology,											
	biomaterials, biosynthesis and biotransformation, bioethics, biosafety											
Features of the	The program provides in-depth theoretical and practical training,											
program	generalization of the results of project-technological and industry-											
program	technological solutions, scientific-research work, implementation, and											
	defense of qualifying work. The program develops employment											
	prospects in modern biotechnological enterprises. Provides opportunities											
	for the implementation of international academic mobility of											
	participants in the educational process.											
4 – Su	itability of graduates for employment and further study											
Suitability for	The graduate is suitable for the employment at enterprises of any legal											
employment	form (state, municipal, commercial, non-commercial), in organizations											
	and institutions operating in the fields of biotechnology and											
	bioengineering, in educational institutions, research and design											
	institutes. He can hold the following positions: laboratory											
	assistant/laboratory technician (chemical, biochemical, microbiological											
	and physical research), technician (biotechnology), technician-laboratory											
	assistant (biotechnology production), trainee researcher, technologist.											
	Professional titles (according to DC 003: 2010): Biotechnology											
	Specialist, Laboratory Assistant (biological research), Laboratory											
	Technician, Laboratory Assistant (biotechnology)											
Further education	Opportunity to study according to the educational-professional and/or											
	educational-scientific program of the second (Master's) level of higher											
	education.											
	5 – Teaching and assessment											
Tanahina and												
Teaching and	Student-centered and problem-oriented learning, hands-on training and											
Teaching and learning	Student-centered and problem-oriented learning, hands-on training and self-study are used. The system of teaching methods is based on the											
C	Student-centered and problem-oriented learning, hands-on training and self-study are used. The system of teaching methods is based on the principles of purposefulness and binarity-active direct involvement of

		~~ .	
		GC 9	Ability to store and multiply moral, cultural, scientific values and achievements of the society on the basis of understanding the history and patterns of development of the subject area, its place in the general system of knowledge about nature and society and in the development of society processes and technology, we
			in the development of society, processes and technology, use different types and forms of motor activity for the active rest and healthy way life.
Professio competer		PC 1	Ability to use knowledge of math and physics to the extent necessary to reach other results of the educational program.
(PC)		PC 2	Ability to use a thorough knowledge of chemistry and biology to the extent necessary to reach other results of the educational program.
		PC 3	The ability to analyze regulatory documentation, necessary to provide engineering activities in the industry of biotechnology.
		PC 4	Ability to work with biological agents, which are used in biotechnological processes (microorganisms, fungi, plants, animals, viruses, their individual components).
		PC 5	Ability to conduct experimental studies connected with the improvement of biological agents, and cause changes in the structure of the hereditary apparatus and functional activity of biological agents.
		PC 6	Ability to analyze raw materials, semi-finished products, target products of biotechnology production.
		PC 7	Consideration of the commercial and economic context in the design of biotech productions of various applications (industrial, food, pharmaceutical, agricultural, etc.).
		PC 8	Ability to use design techniques for the production of biotechnological products of various applications.
		PC 9	Ability to use knowledge of math and physics to the extent necessary to reach other results of the educational program.
		PC 10	Ability to draw up production flow charts of biotechnological products of various applications.
		PC 11	Ability to draw up production hardware configurations of biotechnological products of various applications.
		PC 12	various applications.
		PC 13	Ability to evaluate biotechnological efficiency of the process.
		PC 14	The ability to use modern automated biotechnology production management systems of various purposes, their technical, algorithmic, information and software to solve professional tasks.
		DC 15	
		11 C 13	Ability to comply with biosafety, biosecurity and bioethics.
Knowles	dae and under	etandi-	7 – Program learning outcomes
PLO 1	dge and under		dern mathematical methods to solve practical problems related to
	research and	design	of biotechnological processes. Use knowledge of physics to cical processes
PLO 2	Be able to p	erform	qualitative and quantitative analysis of substances of inorganic, al origin, using appropriate methods.
PLO 3	Be able to me	easure n	utrient media composition, to determine points of their preparation
			control the quality of raw materials and finished products based on
DI O 4			vsicochemical properties of organic and inorganic substances.
PLO 4			e regulations about products certification, requirements for the ality management systems in enterprises, rules for technical

	documentation and technological process, based on knowledge gained during practical
	training.
PLO 5	Be able to analyze normative documents (state and industry standards, technical
	guidelines, etc.), compile separate sections of technological and analytical
	documentation for biotechnological products for various purposes; analyze
	technological situations, choose rational technological solutions.
Applicat	tion of knowledge and understanding (skills):
PLO 6	Be able to determine and analyze the basic physicochemical properties of organic
	compounds that are part of biological agents (proteins, nucleic acids, carbohydrates,
	lipids).
PLO 7	Be able to apply knowledge of the composition and structure of different cell types in
	order to determine the optimal conditions for cultivation and the potential of the cells in
	biotechnology.
PLO 8	Be able to isolate and identify microorganisms of different systematic groups from
	natural ecosystems. Determine the morphological, cultural, physiological, biochemical
	properties of various biological agents.
PLO 9	Be able to prepare the basic nutrient media for the cultivation of various biological agents.
	Evaluate the growth of biological agents in media of different composition.
PLO 10	Be able to do experimental research to determine the impact of physicochemical and
DI 0 11	biological factors of the environment on the viability of cells of living organisms.
PLO 11	Be able to perform basic genetic and cytological studies to improve and enhance the
	biosynthetic capacity of biological agents, taking into account the principles of
	biosafety, biosecurity and bioethics (induced mutagenesis using physical and chemical
PLO 12	mutagenic factors, selection and accumulation of auxotrophic mutants, etc.).
PLO 12	Using microbiological, chemical, physical, physicochemical and biochemical methods,
	be able to perform chemical control (determination of the concentration of disinfectant solutions, titrants, concentration of nutrient components, etc.), technological control
	(concentration of carbon and nitrogen sources in the culture fluid during the process;
	target product); microbiological control of nutrient media after sterilization,
	microbiological purity of biological agent, etc.), microbiological purity and sterility of
	biotechnological products for various purposes.
PLO 13	Be able to carry out a feasibility study for the production of biotechnological products
12010	for various purposes (determination if there is a need in target product and calculation
	of production capacity).
PLO 14	Be able to justify the choice of biological agent, the composition of the nutrient
	medium and method of cultivation, the necessary additional work and the main stages
	of the technological process.
Making	judgments:
PLO 15	Based on knowledge about the laws of mechanical, hydromechanical, heat and mass
	transfer processes and basic design characteristics, be able to choose the appropriate
	equipment in the process of designing the production of biotechnological products for
	various purposes to ensure their maximum efficiency.
PLO 16	Based on the knowledge gained during the internship at enterprises and institutions, be
	able to carry out product calculation and calculation of technological equipment.
PLO 17	Be able to compile a material balance for one cycle of the production process,
	equipment specifications and a map of step-by-step control with the indication of
	production control points.
PLO 18	Be able to substantiate and select the appropriate technological equipment and
	graphically depict technological process according to the requirements of regulatory
	documents using the knowledge gained during practical training.
PLO 19	Be able to use computational design systems to develop technological and hardware
	schemes of biotechnological productions.

PLO 20 PLO 21 PLO 22 PLO 23	synthesis of economic coo nutrient value Be able to for biotechnologi Be able to applabor protecti solutions. Be recreation and Be able to use state formati understanding norms. Be able to co	biotechnological process (growth parameters of biological agents, the rate of synthesis of the target product, the synthesizing capacity of biological agents, economic coefficient, yield of the target product from the substrate, productivity, nutrient value, etc.). Be able to formulate tasks for development of automation systems for production of biotechnological products for various purposes. Be able to apply social, environmental, ethical, economic aspects, the requirements of labor protection, industrial sanitation and fire safety in the formation of technical solutions. Be able to use different types and forms of physical activity for active recreation and healthy lifestyle. Be able to use in product and social activities fundamental concepts and categories of state formation to substantiate their own views and political beliefs with understanding of Ukraine social and political history, legal principles and ethical norms. Be able to communicate with specialists and non-specialists about ideas, problems,											
	solutions and personal experience in the field of biotechnology and bioengineering is state (official) or one of the main European languages.												
		Resource support for program implementation											
Staffing		All scientific and pedagogical workers who carry out the educational and professional program correspond to the profile and direction of the disciplines taught by qualification; they have the necessary experience of pedagogical and practical work. Specialists with experience in scientific, managerial, innovative, creative and professional work, foreign teachers are involved in the organization of the educational process.											
Material technical	and support	Logistics fully allows ensuring the educational process throughout the cycle of training in the specialty. Laboratory equipment includes: complex equipment for the development, production, and characterization of biotechnological products of various origins in structure and function; orbital thermal shaker incubator, natural convection microbiological incubator, electrophoresis chamber, PCR analyzer and PCR box, enzyme-linked immunosorbent assay equipment, microscopes with video cameras for photo and video studies of microbiological objects, spectrophotometers for quantitative and qualitative analysis, microdispensers, centrifuges, including necessary technical support, complete with computer and multimedia equipment. The condition of the premises is certified by sanitary passports that comply with applicable regulations.											
Informati methodol support		The program is fully equipped with an educational and methodological complex of all components of the educational program, the availability of which is presented in the modular environment of the educational process of the University.											
Ma42 1	114	9 – Academic mobility Drawidge for the possibility of academic mobility in some components											
National mobility	credit	Provides for the possibility of academic mobility in some components of the educational program, providing the acquisition of general and /											
moomity		or professional competencies.											
Internation mobility		The program opens up prospects for participation and internships in research projects and academic mobility programs abroad; conducted in an active research environment.											
Education higher educants		Training of foreign applicants for higher education is carried out according to accredited educational programs.

CC 15	Physical and Colloid Chemistry	3													
CC 16	Biologically active compounds	6	exam credit												
CC 17	Cell Biology	3													
CC 17		6	exam												
CC 18	Biological Chemistry Genetics	3	exam credit												
CC 19	Professional communications	3	credit												
CC 21	General microbiology and virology	6													
CC 22		3	exam												
	Immunology and immunobiotechnology	3	exam												
CC 23	Hygiene and sanitation	3	credit												
	Processes and apparatuses of biotechnological manufactures		exam												
CC 25	General biotechnology	6	exam												
CC 26	Automated design of biotechnological systems	3	exam												
CC 27	Economic efficiency of enterprises	3	credit												
CC 28	Equipment and tools for biotechnological manufacturing	3	exam												
CC 29	Methods and tools of diagnostics in biotechnology	3	exam												
CC 30	Design of biotechnological productions	3	exam												
CC 31	Fundamentals of bioethics and biosafety	3	credit												
CC 32	Regulatory support of biotechnological industries	3	credit												
CC 33	Industrial practice	6	credit												
CC 34	Educational practice	12	credit												
CC 35	Pre-diploma practice	6	credit												
CC 36	Bachelor's thesis	12	attestation												
	Total from the cycle	120													
	The total amount of required components	180													
CCEP	Selective components of the educational progr														
SCEP	Disciplines of free choice of the student	60	credit												
	l amount of sample components	60													
TOTAL	CRDITS	240													

^{*} Physical training (in addition to credits)

2.2. Structural-logical scheme of the educational-professional program for Bachelor's study in specialty 162 Biotechnology and Bioengineering

3. Form of certification of students for higher education

Form of certification of	Certification is carried out in the form of public defense of Bachelor's
students for higher	thesis
education	
Document of higher	State Diploma of Bachelor's Degree qualified as Bachelor in
education	Biotechnology and Bioengineering (Education program
	«Biotechnology»)

4. Correspondence matrix of program competencies to the components of the educational program
